

DIRECT DECK SKIN & PONTOON ALUMINUM INTERNAL FLOATING ROOF

DirecTank's **Direct Deck** Internal Floating Roof is a reliable, efficient, and adaptable internal floating cover option. Featuring high-quality, robust aluminum components, this conventional skin and pontoonaluminum IFR is a cost effective solution and reliable floating cover option.

Both leg-supported and cable-suspended options are available, as are hybrid aluminum-stainless steel and all-stainless steel options. Additionally, the **Direct Deck** is available in both 500 and 1000 models, depending upon specifications and requirements. These models are based upon the API Standard 650 structural design requirements, with the 1000 featuring additional reinforcement for enhanced structural strength. Furthermore, the **Direct Deck** can be easily customized as required to meet the most stringent and unique specifications.

The **Direct Deck** will accommodate a varying range of service conditions, and is equipped with a custom-designed primary seal (mechanical shoe or wiper), with secondary seal and foam dam options, designed to operate efficiently in conjunction with the roof to provide a system with the superior flexibility required to handle reasonable operational and dynamic loads and high cycle frequencies.

Every **Direct Deck** is designed by our engineering team using the data provided and subjected to our rigorous, industry-best quality assurance program.

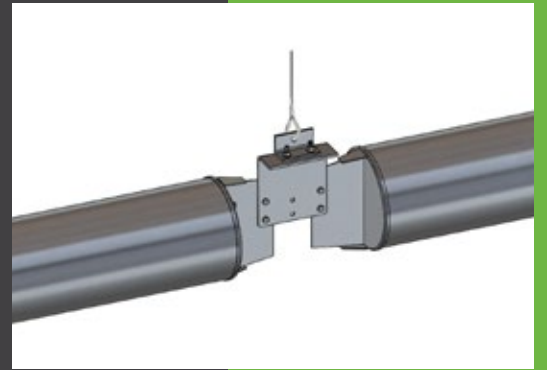

The **Direct Deck** combines sound engineering, proven technology, and installer-friendly enhancements, all at an economical price with the best lead time and warranty in the industry.
